

## Ekspert Agency

### Stelux Stainless Steel Shots

are finding more and more customers every day

As a representative of WINOA, Ekspert Agency has been supplying WA high carbon Steel Shot and Steel Grit products for more than 20 years. We have also been importing WINOA's high quality STELUX Stainless Steel Shot products since the end of 2014, continually reaching more and more customers in the Turkish industry.

For the past 25 years, Ekspert Agency has been successfully representing WINOA, which is well known for the brand name "W Abrasives". Headquartered in France and founded in 1961, Wino Group produces Steel Shot & Grit and Stainless Steel Shot in 14 factories that it owns worldwide. The company has more than 40% of the global market.

WINOA is a leader in the steel abrasive industry due to the numerous benefits offered to its clients, such as technical support, surface treatment assessments and reporting or the reliable blasting cost reductions.

For the past year, Ekspert Agency has also been providing the Turkish industry with WINOA's STELUX Stainless Steel Shot products, which are manufactured with high quality standards.

WINOA/EKSPERT offers superior services to its customers in Turkey with its STELUX Stainless Steel Shot products, superb WINOA quality and free support services for technical issues.

Due to its outstanding technical properties and other advantages, STELUX is used for surface cleaning, surface preparation and finishing of forged and cast stainless steel parts, all kinds of aluminum parts, aluminum and zinc injection molding and all non-ferrous metals.

STELUX can be safely used for deburring, surface cleaning and surface roughening before painting and coating of aluminum, zinc, brass, stainless steel and non-metallic castings, without the risk of oxidation and corrosion of the materials surface.

STELUX Stainless Steel Shots enable cost advantages during and after abrasive blast cleaning process. They are manufactured in two quality levels: martensitic STELUX C Chromium Stainless Steel Shot and austenite STELUX CN 18/10 Chromium-Nickel Stainless Steel Shot.

STELUX Stainless Steel Shots are widely used for providing smooth and decorative appearance (brushing) processes of various manufactured products made

from aluminum, zinc, brass and stainless steel.

Moreover, STELUX Stainless Steel may successfully replace the chemical surface preparation by acid pickling of the stainless steel and aluminium products.

STELUX is the best product for roughening the surface of aluminium and zinc parts prior to Teflon® coating, anodizing, painting and other coating applications.
